RESEARCH AREA & EXPERTISE

My research interests focused on bio-fabrication, bioprocessing and developing biomaterials based solutions for health and environmental issues, which include:

- ☐ Developing biopolymer-based aerogels and microspheres for controlled drug delivery applications.
- ☐ Improving the performance of different products by using biomaterials.
- ☐ Smart utilization of wastes to develop useful materials for environmental applications.
- ☐ Pharmaceutical and cosmetic products development from biomaterials.

TEACHING & SUPERVISION

TEACHING:

- Food Bioprocess Technology, Environmental Bioprocess Technology, Renewable Biomass and Quality Assurance And Safety Of Bioprocess Products.

RESEARCH:

- Medical applications of biopolymers and biomaterials; Microbial biotechnology; Sustained and controlled drug delivery; Tissue scaffolding; Plant tissue culture and micropropagation.

RELATED SUSTAINABLE DEVELOPMENT GOALS
