## Vision and Mission

### Universiti Sains Malaysia

#### Vision

Transforming Higher Education for a Sustainable Tomorrow

#### Mission

USM is a pioneering, transdisciplinary research intensive university that empowers future talents and enables the bottom billions to transform their socio-economic well-being

## Vision and Mission

### School of Industrial Technology

#### Vision

World class centre in technological innovation for a sustainable tomorrow

#### Mission

1. To be the prime education provider of technologists who are competent, capable of independent thinking, possess communication and analytical skills, and able to fulfil the needs in various industries and socio-economic development.
2. To pursue cutting-edge research in the fields of Food Technology, Bioresource Technology, Environmental Technology, and Bioprocess Engineering Technology.
3. To contribute to the well-being of the community through sustainability-led dynamic transdisciplinary academic programmes, research innovation, teamwork, and continuous improvement.

## Niche Research Area

### School of Industrial Technology

Sustainable Materials, Processing, and Energy Technologies

# History

## School of Industrial Technology

1973

The School of Industrial Technology commenced with the establishment of the School of Applied Sciences. The School offered the Bachelor of Applied Science programmes in Electronic Science and Technology, Food Science and Technology, and Polymer Science and Technology.

1984

The name of the School was changed to the School of Engineering Sciences and Industrial Technology. Hence, the curricula were amended to Bachelor of Engineering (B. Eng) and Bachelor of Technology (B. Tech) to meet the requirement of engineering and industrial technology courses.

1986

The School was split into :

- School of Electrical and Electronic Engineering
- School of Materials and Mineral Resources Engineering
- School of Industrial Technology

School of Industrial Technology offered Bachelor of Technology programmes in Food Technology, Polymer Science and Technology, Quality Control & Instrumentation, and Wood, Paper and Coatings Technology.

2001

Polymer Technology and Quality Control & Instrumentation programmes were upgraded into:

- Polymer Engineering programme
- Mechatronic Engineering programme

1999

Environmental Technology programme was introduced by School of Industrial Technology.

2002

Wood, Paper and Coatings Technology programme was renamed Bioresource, Paper and Coatings Technology programme.

2008

Bioprocess Technology programme was introduced by School of Industrial Technology.

2018

Master of Science (Environmental Science) programme was introduced by School of Industrial Technology.

2020

Bioresource, Paper and Coatings Technology programme was renamed Bioresource Technology programme.

2022

Bioprocess Technology programme was changed to Bioprocess Engineering Technology programme.

# Management

| 8  | Programme Chairman (Bioprocess Engineering Technology)                 | Dr. Mohamad Hafizi Abu Bakar                                    |
| 9  | Senior Assistant Registrar (Academic & Administration)                 | Mdm. Rasslene Rass Rasalingam                                   |
| 10 | Assistant Registrar (Postgraduate & Human Resource)                    | Ms. Nur 'Aqila Badrul Hisham                                    |

## Academic Programme

The School of Industrial Technology offers the following bachelor degrees:

- Bachelor of Technology (Honours) (Food)
- Bachelor of Technology (Honours) (Bioresource)
- Bachelor of Technology (Honours) (Environment)
- Bachelor of Bioprocess Engineering Technology with Honours

Acceptance to any of the above programmes is subjected to selection and entry qualification. Most of the first year courses consist of basic science courses in Chemistry, Mathematics, Physics, and Computer. From level 200, all students are required to enrol for courses relevant to their respective programmes up to level 300 (Bioresource and Environmental Technologies) or 400 (Food and Bioprocess Engineering Technologies), whereby they are required to conduct one final year research project.

Students are also required to undergo industrial training in various industries relevant to their study programme for 12 (Food, Bioresource, and Environment Technologies) or 24 (Bioprocess Engineering Technology) weeks. This training is aimed at exposing the students to actual working practice and atmosphere of the industry.

## Details of Programme

Type of Programme	Structure of Programme
Bachelor of Technology with Elective	Students choose several elective courses to widen their specialisation area and their knowledge in industrial technology.
Bachelor of Technology with Minor	Students choose and complete one minor area offered by other schools. <ul style="list-style-type: none"><li>● Starting in the second semester of Year 1.</li></ul>

## Environmental Technology

This programme, which is spread over three and a half years, is gaining popularity and its importance needs no introduction since environmental problems are reported and discussed everyday globally. This programme is designed to enable the graduates to respond directly to the various environmental challenges they will face upon entering the work force.

Examples of courses taught include chemical engineering unit operations, water and industrial wastewater treatment (including the design of treatment plants), solid and scheduled waste management, environmental management system, environmental safety, law and regulations, and air and noise pollution. Students will also learn to appreciate the complex issues relating to social, environmental, and economic sustainability.

The curriculum is based on a strong foundation in chemical process engineering for applications in environment-related processes. The elective courses offered are in-line with holistic and multidisciplinary educational approaches.

## Mentor-Mentee System & Counselling Service

The mentors are appointed among the academic staff of the school who provide assistance and guidance to students, mainly in academic matters. However, the school has established an open mentor system, whereby probation students are free to see any of the mentors. Nevertheless, probation students are recommended to discuss academic-related problems with mentors from their own programme.

The mentors appointed are as listed below:

No.	Name	Room No.	Phone Extension	E-mail Address
1.	Ts. Dr. Mohd Hafidz Jaafar	121	2107	mhafidz@usm.my
2.	Dr. Widad Fadhullah	152	5202	widad@usm.my

## Programme Educational Goal & Objectives

The goal of the Bachelor of Technology (Honours) (Environment) degree programme is to produce graduates who have specialised expertise, solid knowledge, critical thinking, creative, research skills in the field of Environmental Technology to meet the employable needs of the country in various related industries or agencies and graduates and able to lead the community for sustainable national development.

Therefore, the Bachelor of Technology (Honours) (Environment) degree programme is designed to produce graduates:

- who are competent, creative, innovative and capable of solving problems in Environmental Technology on the global and society level for sustainable development.
- who can communicate and work in interdisciplinary teams effectively in the Environmental Technology field.
- who have leadership skills, a positive attitude, and professional ethics in the Environmental Technology field.
- who can contribute to society's well-being and the sustainability of the environment.
- who have an interest in entrepreneurship and constantly strive to acquire new knowledge through research, continuing education and/or professional development activities.

## Programme Learning Outcomes

At the end of the programme, students will be able to:

1. Acquire the advanced and comprehensive theoretical and technical knowledge and skills in the area of Environmental Technology specialised (Knowledge).
2. Apply extensive technical skills in the area of Environmental Technology specialisation (Practical Skills).
3. Identify and resolve issues and problems in a critical, creative, and innovative manner in the area of Environmental Technology specialisation (Cognitive Skills).
4. Acquire the skill to communicate effectively in a well-structured manner to a diversity of audiences (Communication Skills).
5. Display a sense of responsibility and master social skills in diverse learning and working communities locally and internationally (Interpersonal Skills).
6. Understand and manage to make decision in a professional and ethical manner within the varied social and professional environment and practice (Ethics and Professionalism).
7. Manage current information and recognise the importance of lifelong learning (Personal Skills).
8. Acquire entrepreneurial knowledge base for career development (Entrepreneurship Skills).
9. Function effectively as an individual and in a team with the ability to lead within broad organisational scales. (Leadership, Autonomy and Responsibility).
10. Demonstrate basic digital skills and technological application for living, learning and working in a society (Digital Skills).
11. Demonstrate numeracy skills in all aspects of life (Numeracy Skills).

## Programme Requirements

Course Code Classification	Normal Programme	Minor Programme	Min. Total Unit Requirements
T	72	72	
E	30	10	
M	0	20	120
U	18	18	

### Notes:

T (core courses) – compulsory courses for a particular area of specialisation that must be taken and passed.

E (elective courses) – courses must be taken by students with elective programme to strengthen their technology specialisation courses.

M (minor courses) – minor specialisation offered by other schools.

U (university requirements) – courses to fulfil the university requirements.

## Graduation Requirements

- ☑ Fulfil the minimum required (7 semesters) of the residential requirement for the programme of study and has not exceeded the maximum period of study (12 semesters).
- ☑ Fulfil all credit requirements of the courses for the programme of study required units such as the requirements for each component (core, elective/ minor, and university courses or option).
- ☑ Obtained a CGPA of 2.00 and above for core courses.
- ☑ Obtained a CGPA of 2.00 and above for the programme.
- ☑ Achieved a minimum of 'C' or a grade point of 2.00 for Bahasa Malaysia, English (4 units), Appreciation of Ethics and Civilisations, Philosophy and Current Issues, and Core Entrepreneurship courses.

 \*\* Course is offered in TWO (2) semesters (unit counted per semester is 4).

# List and Synopsis of Courses

## Level 100

### 1. BO1102/3 Ecology

This is an introductory course on general ecology for students to understand various principles of ecology. The concept of ecology will be defined in terms of basic components, structures and processes that occur in ecosystems, fundamental populations ecology, communities and ecosystems, together with the analysis and interpretation of the distribution patterns of organisms. Biotic and abiotic factors which characterize terrestrial, freshwater and marine ecosystems will also be discussed. The productivity of these ecosystems will be compared. At the end of this course, knowledge in ecology will be applied to evaluate human impacts towards ecosystems, which have caused environmental disasters such as the greenhouse effect, depletion of the ozone layer and eutrophication. The definition, reasons and aims of conservation will also be defined.

### 2. IBG111/3 Industrial Microbiology

Discusses the involvement of microorganisms in industrial processes, specifically in the production of various product materials including enzymes, food, beverages, fuels, pharmaceuticals, organic solvents, cell biomass, and also clean technology that is used for waste treatment and pollution control. Emphasis will be given on the determination of important industrial microorganism, selection and isolation methods, maintenance, storage, improvement of industrial microorganisms, and the involvement of microorganisms in various industries. Relevant practical classes will also be conducted.

### 3. IEA112/4 Society and Environment Project

This course introduces students to the community and the environment through the interdisciplinary discipline of natural sciences with socio-political sciences and links environmental-ecological, social and economic aspects toward achieving sustainable societies. Students will be exposed to the concept of capitalism encompassing the world's economic-political system in line with the environmental-ecological crisis. Students will be encouraged to discuss and articulate their views on the interests of various conflicting parties, for example between government, corporate and non-governmental environmental activists. Students will also propose and implement appropriate, individual and group social projects on the exploitation of natural resources and waste generation by the industrial community.

### 4. IEG101/3 Introduction to Environmental Science

This course introduces Environmental Science as a basis to Environmental Technology. Students are exposed to the fundamentals of environmental chemistry and environmental microbiology including field and laboratory work.

### 5. IEG104/3 Introduction to Environmental Technology

This course introduces the development of environmental technology. Definitions that distinguish the areas of environmental engineering versus applied and pure sciences will be elaborated. This course will focus on the introduction of application-related technology to address the problems of global pollution. In addition, some basic analyses of environmental pollution (water, air, soil, and noise) will be introduced through laboratory and field work.

### 6. IEK101/3 Chemical Process Calculations

This course is about general calculations involved in chemical processes. The students will be exposed to mass and energy balance and the steps needed to solve related problems. These topics will help the students solve problems effectively through the correct problem-solving methodology, relevant data collection and data analysis. This course also introduces the student to the properties and phase behaviour of steam, gases as well as basics of chemistry and physics.

### 7. IEK108/3 Process Fluid Mechanics

**Course Prerequisites:** s IEK101/3

This course introduces students to the concept of fluid statics, incompressible and compressible fluid flow, as well as flow across submerged bodies. Students will also be exposed to the topics of metering, separation, mixing, and pumping. Other topics include Fanning friction factor, pumping power and cost, as well as flow rate calculations.

### 8. IEK115/3 Environment, Safety and Health Legislation

This course exposes the student to the concept of environmental, occupational safety and health management based on two main acts, Environmental Quality Act 1974 and the Occupational Safety and Health Act 1994. This course uses a case study learning approach.

### 9. IUK107/4 Chemistry for Technologist

This syllabus is aimed to be comprehensive in scope and mainly intended to strength the applied chemistry background of the students. Students will learn the basics of inorganic chemistry, nuclear and radiochemistry, organic chemistry, and instrumental analysis. Spectroscopy methods such as FT-IR, NMR, ICP, and AAS will be used for the characterisation of functional groups, hydrogen atoms characterisation, and analysis of inorganic elements.

### 10. IUK108/4 Statistic with Computer Applications

This course discusses on probability models for quality control of discrete random variation: random variation, cumulative distribution function, mean, variance and standard deviation. The course also discusses Discrete distribution: hypergeometric distribution, Binomial distribution, Poisson distribution, Continuous distribution, Normal distribution, exponential distribution and uses in reliability modelling.

### 11. IUK191/4 Mathematics I

This course introduces the concepts of functions and limits of single variable. Linear, polynomial, logarithmic, exponential and trigonometry functions will be discussed. The focus will be on the understanding of concept and solving of differentiation and integration with applications. Students are then introduced to differential equations focusing on separable differential equation and first-order linear equations. Matrices and determinants are taught in solving systems of linear equations by using Gauss and Cramer methods.

### Level 200

#### 12. IEA201/2 Unit Operations Laboratory

**Course Prerequisites:** s IEG104/3 & c IEK213/3

This course consists of practical work based on chemical process engineering unit operations principles taught in the following courses: IEK108/3 Process Fluid Mechanics, IEK212/3 Process Heat Transfer, and IEK213/3 Mass Transfer and Separation Processes.

#### 13. IEA202/2 Environmental Bioindicators

**Course Prerequisites:** s IEG101/3 & s IEG104/3

This course provides an understanding of the concept of using biological indicators in ecosystems. The use of this biological indicator is based on the tolerance or existence of an organism in the terrestrial and aquatic ecosystem as a first step of detecting environmental changes.

#### 14. IEA216/3 Computer Applications in Industry

**Course Prerequisites:** s IEK101/3

This course introduces the student to the application of computers in Environmental Technology. The course comprises of two parts: a programming software and AutoCAD. The programming software part focuses on the use of computer programming in Environmental Technology. The student will be exposed to commands, the concept of function, statistical tools, and to the computer programming flow chart to develop a useful function to meet Environmental Technology challenges. The AutoCAD part exposes the student to the use of AutoCAD to produce engineering drawings that are clear and appropriate.

#### 15. IEK205/3 Air Pollution Control Technology

**Course Prerequisites:** s IEG104/3

This course exposes students to industrial air pollution problems and control methods. Among the items studied are air quality management, air pollution control devices, meteorological aspects and air pollution dispersion modelling.

#### 16. IEK211/3 Equipment Design for Water Treatment

**Course Prerequisites:** s IEG104/3

This course provides exposure on water resources, water characterisation and drinking water standards. This course also explains the water demand, water reticulation system, equipment design of water treatment, and water distribution system.

#### 17. IEK212/3 Process Heat Transfer

**Course Prerequisites:** s IEK101/3

This course introduces the student to the fundamental principles of heat transmission by conduction, convection, radiation, and evaporation. This course will also discuss on the applications of these principles to the solution of industrial heat transfer problems and the design calculations for industrial heat exchanger equipment.

### 18. IEK213/3 Mass Transfer and Separation Processes

#### Course Prerequisites: s IEK101/3

This course introduces the students to the concepts and principles of mass transfer and separation processes. Additionally, unit operations, such as distillation, absorption, adsorption, humidification, filtration, centrifugation, and drying, will be discussed.

### 19. IEK217/3 Environmental Management

This course exposes the students to the concept of planning, implementation and management of the environment through systematic methods. The methods mainly discussed in this course are the Environmental Management System in-line with the international standard ISO 14001 and Environmental Impact Assessment (EIA) along with Environmental Management Plan (EMP). Furthermore, students will learn other methods, such as environmental performance evaluation, environmental labelling and Life Cycle Assessment (LCA).

### 20. IEK218/3 Treatment and Management of Solid Wastes

#### Course Prerequisites: s IEG104/3

This course introduces treatment and management of solid waste. This course also exposes the students to the legislation, characterisation, generation, collection, transport, disposal, solid waste process, and leachate treatment. Concepts related to landfill design will also be discussed.

### 21. IEK219/3 Treatment and Management of Scheduled Wastes

This course covers treatment and management of scheduled waste according to Environmental Quality (Scheduled Wastes) Regulation 2005. The management of scheduled wastes, from its generation until its disposal, is discussed. Environmental pollution prevention and minimisation will also be elaborated. Physical, chemical, and biological treatments of scheduled waste will be summarised.

### 22. IUK208/3 Experimental Design with Computer Applications

This course discusses on the Replication, Randomisation, Blocking, and Definitions in Experimental Design (Experiment, Treatment, Factor, Level, Experimental unit, Experimental design, Random, Replicate).

Completely Randomised Design: Randomisation, Analysis of variance, equal replication and unequal replication, Estimation of the model Parameters, Comparison of Individual Treatment Means: Comparing of pair Treatment Means, Comparing with a control, orthogonal contrast.

Randomised Block Design: blocking, Randomised block design, Model and Assumptions, Missing values, Relative efficiency. Latin Square design Incomplete Block design: balanced incomplete block designs, Partially Balanced incomplete block designs.

Factorial Experiments (Designs): General factorial experiments, 2k Factorial experiment, 3k factorial experiment, Confounding, regression analysis, Response surface: Method of steepest ascent, Analysis of second-order model, Location of stationary point, Designs for fitting the first-Order and second-order models. Mixture experiments.

### 23. IUK291/4 Mathematics II

**Course Prerequisites:** s IUK191/4

This course expands the concepts of functions and limits to two variables. Linear, polynomial, logarithmic, exponential and trigonometry functions will be discussed. The focus will be on the understanding and solving partial derivatives of differentiation and solving double and triple integration with simple applications. Students are then introduced to differential equations focusing on separable differential equation and second-order linear equations. Infinite series, Taylor-MacLaurin series and Fourier series are taught with a view to examine the theory and properties of certain functions that can be represented as sums of series.

### Level 300

### 24. HGT321/3 Technology and Geographic Information

This course aims to describe concepts, process and application of technologies and geographic information which include remote sensing, global positioning system, and geographic information systems in solving spatial problems. The course emphasises on the application of digital remote sensing data in land use mapping and coastal zone management. It also discusses the application of GIS and GPS in urban and regional planning, business and service planning and assessment of socio-economic data in solving spatial problem. The skill acquired from this course allows students to assess and analyse spatial problems as well as look for solution using technology and geographic information.

### 25. IEA300/3 Environmental Technology Laboratory

This course exposes the students to various treatment and measuring methods in noise, air, water, solid wastes, and wastewater treatment through experiments.

### 26. IEA304/6 Environmental Technology Industrial Training

**Course Prerequisites:** Students have completed FOUR (4) semesters of study, regardless of the accumulated units.

This course involves placement of students to undertake internship at industries. During the internship, student are able to gain an insight into industrial practices and appreciate how principles of science, technology and management are applied in the actual workplace.

### 27. IEA313/8 Environmental Technology Research Project

**\*\*Course is offered in TWO (2) semesters**

**Course Prerequisites:**

- (i) Students must take all core courses of levels 100 and 200.
- (ii) Students have collected at least 40 credit units of core courses.

This course will introduce the student problems relating to Environmental Technology. Through research, the student will be tasked to solve the problem. Lecturers will supervise the students in carrying out the literature search, laboratory work, and dissertation writing. The student will also attend a series of lectures on research philosophy, experimental design, scientific thinking, laboratory safety, thesis writing, Viva Voce presentation.

### 28. IEG301/3 Environmental Forensics

**Course Prerequisites:** s IUK108/4

This course provides basic knowledge in environmental forensics by emphasising the use of the relevant methods which are suitable to solve key environmental pollution questions. These methods include chemical and DNA fingerprinting techniques. Chemical fingerprinting techniques to be discussed are mass spectrometry, trace metal analysis, and stable isotopes analysis of light elements, whereas the DNA fingerprinting technique covers methods of DNA extraction and detection of toxin encoding gene. In addition, multivariate statistical methods will be taught to the students in order to recognise patterns of data, and thus obtaining the best information and interpretation from the analyses carried out. At the end of this course, students should know how to organise information and data from various sources in order to tackle the challenges in environmental forensics using critical and logical thinking.

### 29. IEK307/3 Noise and Vibration Control Technology

**Course Prerequisites:** s IEG104/3

This course exposes the student to the physical principles of sound, noise and vibration. The student will be taught data collection and analysis techniques. This course will also expose the student to suggest solutions of noise and vibration problems from the aspect of technology and legislation.

### 30. IEK308/3 Industrial Wastewater Treatment Plant Design

In this course, students will be given a project to design a waste water treatment plant. Students are required to integrate the relevant unit operations, taking into account the main objective of meeting the current environmental legislations. Basic and methods of treatment (physical, chemical, and biological) will be discussed.

### 31. IEK315/3 Indoor Environment

This course explains basic terms, parameters, effects (good and poor) of indoor environment and its relationship with humans, building energy consumption and the environment. Students will learn methods of planning, management and indoor environmental control technology of indoor environment in order to achieve healthy working and living conditions of indoor spaces. In addition, legislations, regulations, standards and guidelines at national and international levels on indoor environment will be discussed.

## Level 400

### 32. IEK409/3 Chemodynamics

Chemodynamics is a study of the transport and fate of chemical substances within the three environmental geospheres: water, air, and solids. Course objectives are to introduce and evaluate current methods or models for materials transport from an environmental entry site to the various geospheres, so that environmental exposure can be estimated.

### 33. IEK414/3 Environmental Audit

In this course, the basic principles of environmental auditing will be discussed. Students will learn how to plan, prepare, conduct an environmental audit and to write an audit report. Also, students will be exposed to the topics of the energy audit, waste audit, occupational safety and health audit, qualification and registration process of auditors as well as risk assessment.

# Minor Programmes

All students that choose to take a Minor programme must choose one minor programme and commence the programme in the second semester of the first year of their studies. These students must complete 20 units of the courses in the minor package.

Among the minor programmes offered are:

School	Minor Package	Code
School of Biological Sciences	Biology	oB01
School of Physics	Physics	oZ01
School of Chemical Sciences	Chemistry	oK01
School of Mathematical Sciences	Mathematics	oM01
School of Humanities	English Language	oH01
	Malay Linguistics	oH02
	Geography	oH03
	Literature	oH04
	Islamic Studies	oH05
	History	oH06
	Japanese Studies	oH11
	Philosophy and Civilisations	oH15
	Translation and Interpretation	oH14
	School of Language, Literacies, & Translation	Japanese Language Studies
Chinese Language Studies		oL02
Communicational Arabic		oL06
School of Art	Fine Arts	oH07
	Performing Arts	oH08
	Musics	oH09
	Drama and Theatre	oH10

For students wishing to register for the minor programme, please make sure that time-tabling and course scheduling allow you to graduate in the stipulated period. See the Minor Programmes Handbook for further information on Minor Specialisations.

*“Tell me and I forget. Teach me and I remember. Involve me and I learn.”*

*–Benjamin Franklin–*

Get enough sleep, especially the night before your exam. Have regular short breaks every 60 min to help you focus better.

Start studying early and plan your study time in advance. Use a calendar and write down what you are planning to do each day.

Eat healthy food that fuels your brain. Food like apples, walnuts, and blueberries can improve your ability to focus, retain information and remain mentally alert.

Avoid any distractions. Turn off your phone and the television, and check your social media updates only during the break time.

## STUDY TIPS

to be more productive

Use mind maps to visualise your topics better, improve your memory, and prioritise information.

During high intensity study periods, it is recommended to take breaks to exercise. It will make you feel more energised and refreshed.

Some people find that listening to music while studying helps them be more productive. If that's your case, keep the volume low and play songs that you don't find yourself singing along to.

Treat yourself! After taking an exam, meet a friend for coffee, go to the cinema or just take a well-deserved break before starting to study for your next exam.
